2019 Typical Electric Bill Survey

Introduction

This is the 36th year NMPP Energy has conducted an annual survey of member electrical retail rates. Of the 145 utilities participating this year, 116 are NMPP members and 29 are non-member utilities operating in surrounding areas. Additional copies of this report are available by request to tle@nmppenergy.org.

Participants provided billing information for rates in effect through December 2019 for the following:

<u>Rate Service Class</u>	<u>Demand & Energy Use</u>
Residential	500 kWh 1,000 kWh 2,500 kWh
Residential All-Electric/Winter Heat	2,500 kWh
General Service	(Load Factor = 57%) 6 kW & 2,500 kWh (Load Factor = 57%) 12 kW & 5,000 kWh (Load Factor = 57%) 24 kW & 10,000 kWh (Load Factor = 57%) 60 kW & 25,000 kWh
General Service All-Electric/Winter Heat	(Load Factor = 57%) 60 kW & 25,000 kWh
Large Light and Power	(Load Factor = 75%) 100 kW & 55,000 kWh (Load Factor = 62%) 500 kW & 225,000 kWh (Load Factor = 72%) 1,000 kW & 525,000 kWh

The survey results are arranged by the above-listed Rate Service Classes. The typical bills include the appropriate "Production/Energy Cost Adjustment" (PCA/ECA) and Franchise Fee, when applicable.

The composite statistics presented reflect ranking of typical bills by utility for each rate service class and usage level. If the participant did not have a specified All-Electric/Winter Heat rate, the standard rates were used. For General Service and Large Light and Power usage above 2,500 kWh, three-phase service voltage rates were used, when available; and for rates with an on-peak and off-peak demand rate, the on-peak rate was used.

The utility's General Service (non-demand) rate is applied to "Use" levels where the KW level is below the KW load required for application to a General Service Demand or Large Power rate.

An alphabetical listing by utility and their membership affiliation is included. The MEAN, NMPP and Total Survey bill averages and the percent difference from the highest and lowest bill are shown for each rate class and usage level.

N/A means the rate was not made available.

This report is prepared by NMPP's Engineering Services Staff: Brenda Hering, Rate Analyst; Sunny Sun, Rate Analyst and Thanh Le, Rate Analyst. Special thanks to Amber Degner and Laurie Keiser for their contributions to data collection and report production.

2019 NMPP Energy Typical Water Bill Survey

Introduction

This is the 9th year NMPP Energy has conducted an annual survey of Municipal Water rates. This year 154 utilities participated in the survey. The report is available by request to tfe@nmppenergy.org. Billing information for the Rates effective as of December 2019 is provided for the following rate service classes:

<u>Rate Service Class</u>	<u>Water Use</u>		
Residential (5/8" or 3/4" meters)*	3,000 gal.	=	401 cf
	5,000 gal.	=	667 cf
	8,000 gal.	=	1,070 cf
Commercial (2" meter)	15,000 gal.	=	2,005 cf
	20,000 gal.	=	2,674 cf

Note: 1,000 gallons equals about 134 cubic feet.

Typical bill averages and the percent difference from the highest and lowest bill are shown for each rate class and usage level. N/A means that the rate was not made available. In case of Flat Fees, fees shown are non-metered flat fees charged within reported rate classes.

This report is prepared by NMPP's Engineering Services Staff: Brenda Hering, Rate Analyst; Sunny Sun, Rate Analyst and Thanh Le, Rate Analyst. Special thanks to Amber Degner and Laurie Keiser for their contributions to data collection and report production.

* If separate rates provided for 5/8" and 3/4" meters, used 5/8"
 cf = cubic feet
 gal. = gallon

2019 NMPP Energy Typical Sewer Bill Survey

Introduction

This is the 9th year NMPP Energy has conducted an annual survey of Municipal Sewer rates. This year 152 utilities participated in the survey. The report is available by request to tfe@nmppenergy.org. Billing information for the Rates effective as of December 2019 is provided for the following rate service classes:

<u>Rate Service Class</u>	<u>Water Use</u>		
Residential (5/8" or 3/4" meters)	3,000 gal.	=	401 cf
	5,000 gal.	=	667 cf
	8,000 gal.	=	1,070 cf
Commercial (2" meter)	15,000 gal.	=	2,005 cf
	20,000 gal.	=	2,674 cf

Note: 1,000 gallons equals about 134 cubic feet.

Typical bill averages and the percent difference from the highest and lowest bill are shown for each rate class and usage level. N/A means that the rate was not made available. In case of Flat Fees, fees shown are non-metered flat fees charged within reported rate classes.

This report is prepared by NMPP's Engineering Services Staff: Brenda Hering, Rate Analyst; Sunny Sun, Rate Analyst and Thanh Le, Rate Analyst. Special thanks to Amber Degner and Laurie Keiser for their contributions to data collection and report production.

cf = cubic feet
gal. = gallon
