2014 Typical Electric Bill Survey

Introduction

This is the 31st year NMPP Energy has conducted an annual survey of member electrical retail rates. Of the 139 utilities participating this year, 117 are NMPP members and 22 are non-member utilities operating in surrounding areas. Additional copies of this report are available by request to peuler@nmpenergy.org.

Participants provided billing information for rates in effect through December 2014 for the following:

<u>Rate Service Class</u>	<u>Demand & Energy Use</u>
Residential	500 kWh 1,000 kWh 2,500 kWh
Residential All-Electric/Winter Heat	2,500 kWh
General Service	(Load Factor = 57%) 6 kW & 2,500 kWh (Load Factor = 57%) 12 kW & 5,000 kWh (Load Factor = 57%) 24 kW & 10,000 kWh (Load Factor = 57%) 60 kW & 25,000 kWh
General Service All-Electric/Winter Heat	(Load Factor = 57%) 60 kW & 25,000 kWh
Large Light and Power	(Load Factor = 75%) 100 kW & 55,000 kWh (Load Factor = 62%) 500 kW & 225,000 kWh (Load Factor = 72%) 1,000 kW & 525,000 kWh

The survey results are arranged by the above-listed Rate Service Classes. The typical bills include the appropriate "Production/Energy Cost Adjustment" (PCA/ECA) and Franchise Fee, when applicable.

The composite statistics presented reflect ranking of typical bills by utility for each rate service class and usage level. If the participant did not have a specified All-Electric/Winter Heat rate, the standard rates were used. For General Service and Large Light and Power usage above 2,500 kWh, three-phase service voltage rates were used, when available; and for rates with an on-peak and off-peak demand rate, the on-peak rate was used.

The utility's General Service (non-demand) rate is applied to "Use" levels where the KW level is below the KW load required for application to a General Service Demand or Large Power rate.

An alphabetical listing by utility and their membership affiliation is included. The MEAN, NMPP and Total Survey bill averages and the percent difference from the highest and lowest bill are shown for each rate class and usage level.

N/A means the rate was not made available.

This report is prepared by NMPP's Engineering Services Staff: Phil Euler, P.E. Manager; Brenda Hering, Assistant Rate Analyst; and Thanh Le, Rate Analyst. Special thanks to Kara Hunt and Jennifer Voliner for their contributions to data collection and report production.

2014 NMPP Energy Typical Water Bill Survey

Introduction

This is the 4th year NMPP Energy has conducted an annual survey of Municipal Water rates. This year 119 utilities participated in the survey. The report is available by request to peuler@nmppenergy.org. Billing information for the Rates effective as of December 2014 is provided for the following rate service classes:

<u>Rate Service Class</u>	<u>Water Use</u>		
Residential (5/8" or 3/4" meters)*	3,000 Gallons	=	401 Cubic Feet
	5,000 Gallons	=	667 Cubic Feet
	8,000 Gallons	=	1,070 Cubic Feet
Commercial (2" meter)	15,000 Gallons	=	2,005 Cubic Feet
	20,000 Gallons	=	2,674 Cubic Feet

Note: 1,000 gallons equals about 134 cubic feet.

Typical bill averages and the percent difference from the highest and lowest bill are shown for each rate class and usage level. N/A means that the rate was not made available. In case of Flat Fees, the Fee is used for all usage levels.

This report is prepared by NMPP's Engineering Services Staff: Phil Euler, P.E. Manager; Brenda Hering, Assistant Rate Analyst; and Thanh Le, Rate Analyst. Special thanks to Kara Hunt and Jennifer Voliner for their contributions to data collection and report production.

* If separate rates provided for 5/8" and 3/4" meters, used 5/8"

2014 NMPP Energy Typical Sewer Bill Survey

Introduction

This is the 4th year NMPP Energy has conducted an annual survey of Municipal Sewer rates. This year 115 utilities participated in the survey. The report is available by request to peuler@nmppenergy.org. Billing information for the Rates effective as of December 2014 is provided for the following rate service classes:

<u>Rate Service Class</u>	<u>Water Use</u>		
Residential (5/8" or 3/4" meters)	3,000 Gallons	=	401 Cubic Feet
	5,000 Gallons	=	667 Cubic Feet
	8,000 Gallons	=	1,070 Cubic Feet
Commercial (2" meter)	15,000 Gallons	=	2,005 Cubic Feet
	20,000 Gallons	=	2,674 Cubic Feet

Note: 1,000 gallons equals about 134 cubic feet.

Typical bill averages and the percent difference from the highest and lowest bill are shown for each rate class and usage level. N/A means that the rate was not made available. In case of Flat Fees, the Fee is used for all usage levels.

This report is prepared by NMPP's Engineering Services Staff: Phil Euler, P.E. Manager; Brenda Hering, Assistant Rate Analyst; and Thanh Le, Rate Analyst. Special thanks to Kara Hunt and Jennifer Voliner for their contributions to data collection and report production.
